HID XENON

HID汽车照明

HID是将氙气和金属卤化物注入HID内的光发射管进行发光的系统。在控制系统产生的2万伏特的电压下，发光射管中的电子与金属原子碰撞发光。

The HID Lamp is a system that produces light by putting xenon gas and metal halide salts into the light emitting tube installed inside the HID Lamp. The electrons inside the light emitting tube collide with the metal atoms, using 20,000 volts generated from the control system (ballast) to produce light.
